## DMX - 0-10V Dimming Module

- Dimming interface: DMX/RDM, Push Dim.
- Optional output: 0-10V, 5V PWM, 10V PWM.
- With the RDM remote device management protocol.
- Supports DMX512 signal bi-directional communication.
- 4 channels output.
- Built-in relay for ON/OFF control of LED driver.
- Dimming range: $0 \sim 100 \%$.
- Full protective plastic housing.
- Compliant with Safety Extra Low Voltage standard.
- Suitable for indoor environments.

## Push Dimming

- On/off control: Short press.
- Stepless dimming: Long press.
- With every other long press, the light level goes to the opposite direction.
- Dimming memory: Brightness will be the same as previously adjusted when turning off and on again.

* Please make sure the maximum voltage drop between DMX/RDM controller and LT-844 should not be higher than 2 V . (Maximum cable length for $1.5 \mathrm{~mm}{ }^{2}$ cables is 300 m )
 should not be higher than 0.5 V ; Maximum cable length for $1.5 \mathrm{~mm}^{2}$ cable is 300 m .

## Built-in Relay Connection

* The LT-844 is equipped with a relay that can be used to turn ON/OFF LED driver. The relay is in the closed position when the CH1 generates dimming signal, the relay is in the open position when there is no output signal on the CH1.
* The Max. loaded of built-in relay: 8A resistive current loaded or less than 50A inrush current loaded. Over-loaded of relay is out of warranty

## External Relay Connection

An additional magnetic switch is needed when the total input current of the LED driver is higher than 8 A or inrush current is greater than 50 A , please refer to the figure.
