

MID energy meter and measurement system

Measurable energy efficiency – full cost control

Janitza®

MID energy meter and measurement system

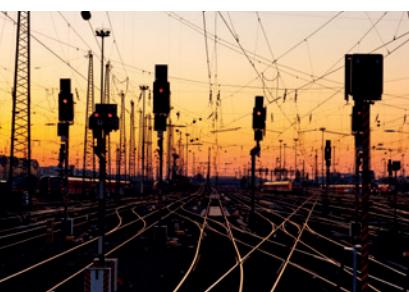

Communication:
Modbus, M-Bus,
S0 pulse outputs

Direct measurement
up to 65 A, transformer
measurement up to 6 A
secondary (CT ratio freely
adjustable)

1 or 2 tariffs
4 quadrant measurement
Class 1 for effective
energy

MID and IEC calibrated
at the factory
Lead-sealed terminal
cover

Measured values:
- Active energy
- Reactive energy
- Active power
- Reactive power

Capture. Assign. Control.

Save money with fair and precise cost assignment

Administrators of shopping centres, airports, hotels, office complexes and other commercial properties all face the same challenge. How can energy efficiency be increased whilst at the same time assigning the costs to all of the tenants in a fair and precise manner? Both objectives can be achieved with the MID energy meters. The assignment of the energy consumption to the individual tenants or consumption points can be made significantly easier through comprehensive acquisition. Sources of energy wastage are quickly identified, undesired energy consumption can be reduced and the energy efficiency increased.

Areas of application

Electronic energy meters are primarily used for the recording of effective energy and reactive energy. Their area of application is in the field of energy management for cost centre analysis. Various communication options are available for this in order to avoid the time consuming process of manually reading out on-site. As a measured value transducer the effective pulses on a control system, e.g. GLT, SPS, SCADA or the ProData® data logger incl. GridVis® network visualisation software, can be switched via pulse outputs.

The M-Bus and Modbus RTU protocols are available via the integrated communications interface for the field of building control technology. With the corresponding selections these interfaces enable the additional values of voltage, current, power, power factor and frequency

on the bus, alongside effective power and reactive power. The energy meters can be used for consumption data acquisition, in conjunction with the measurement devices UMG 96RM-E, UMG 604, UMG 605, UMG 508, UMG 509, UMG 511 and UMG 512 via Modbus RTU for sub-measurements.

Applications

The electronic energy meters are suitable for the measurement of effective and reactive energy consumption. The measurement is designed for 1-phase and 3-phase systems with a voltage of L-N 230 VAC $\pm 20\%$. The current inputs are designed for either direct connection or measurement via a current transformer. The installation is implemented via DIN rails, where special value is placed on the extraordinarily compact construction. All meters can be lead-sealed. Effective energy and reactive energy are available in one tariff or two tariffs and in four quadrants. The accuracy of the meter is class 1 for effective energy and class 2 for reactive energy.

Capturing and recording

All meters save the meter readings to non-volatile memory. The meter reading cannot be reset in the MID version.

MID energy meter B21 – Single-phase energy meter, 65 A

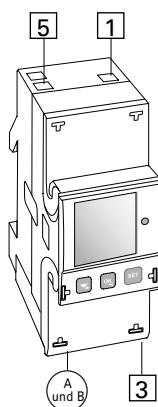

Single-phase energy meter (1 + N)

- Direct connection up to 65 A
- With measured values and alarm function
- Width, 2 DIN modules
- Tested and approved per MID^{*1} and IEC
- Pulse output included

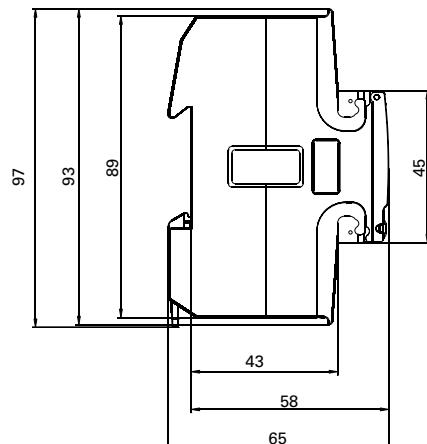

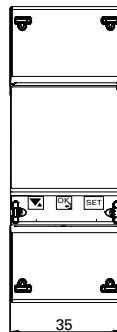

*1 Regional different requirements apply in Switzerland in connection with MID energy meters.

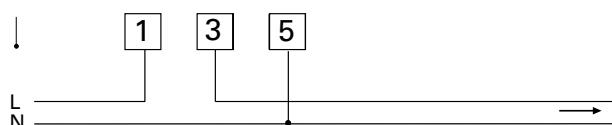

Voltage V	Precision class	Inputs/outputs	Communication	Type	Item no.	Weight
1 x 230 V AC	Active energy: B (class 1)	2 outputs, 2 inputs	Pulse output	B21 311-10J	14.01.353	0.14
	Reactive energy: class 2		Pulse output, RS-485	B21 312-10J	14.01.354	0.15
			Pulse output, M-Bus	B21 313-10J	14.01.355	0.15

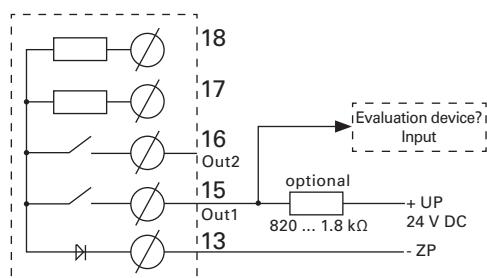

Dimensions in mm

B21 Connection terminals

Pulse output S0

MID energy meter B23 – Three-phase energy meter, direct measurement, 65 A

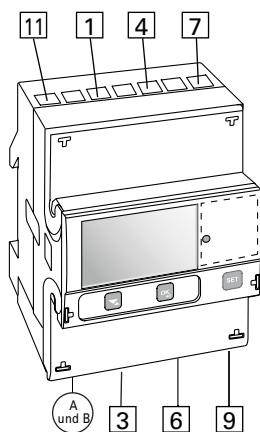

Three-phase energy meter, direct measurement (3 + N)

- Direct connection up to 65 A
- With measured values and alarm function
- For 3-conductor and 4-conductor connection
- Width, 4 DIN modules
- Tested and approved per MID^{*1} and IEC
- Pulse output included

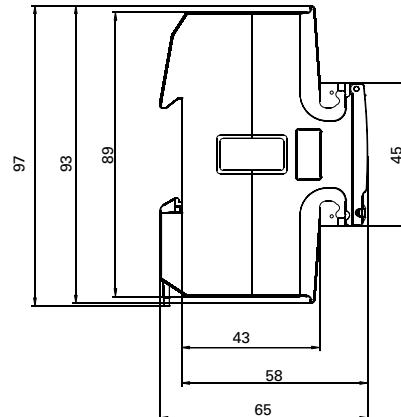

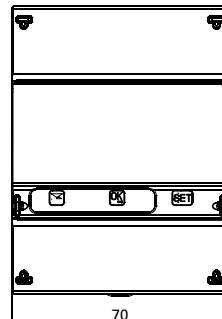

*1 Regional different requirements apply in Switzerland in connection with MID energy meters.

Voltage V	Precision class	Inputs/outputs	Communication	Type	Item no.	Weight
3 x 230/400 V AC	Active energy: B (class 1)	2 outputs, 2 inputs	Pulse output	B23 311-10J	14.01.356	0.33
	Reactive energy: class 2		Pulse output, RS-485	B23 312-10J	14.01.357	0.34
			Pulse output, M-Bus	B23 313-10J	14.01.358	0.35

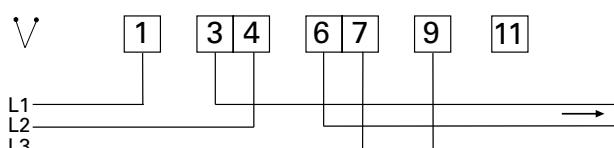

Dimensions in mm

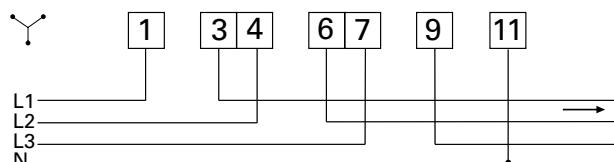

B23 Connection terminals

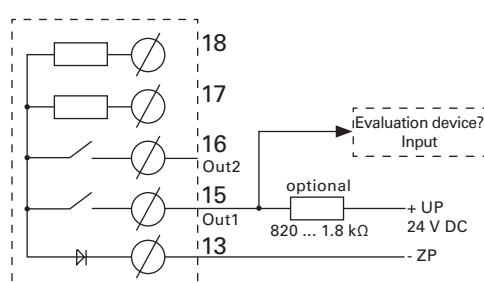

3-conductor connection with 2 measuring units

4-conductor connection with 3 measuring units

Pulse output S0

MID energy meter B24 – Three-phase energy meter, CT measurement, 6 A

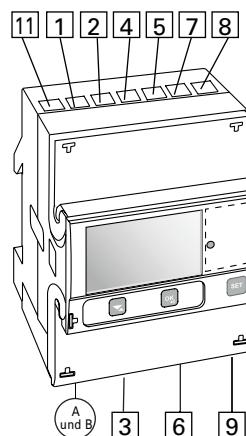

Three-phase energy meter, CT measurement (3 + N)

- Transformer connection CT, 1(6) A
- Transformer ratio freely adjusted up to 9999/1-6
- With measured values and alarm function
- For 3-conductor and 4-conductor connection
- Width, 4 DIN modules
- Tested and approved per MID^{*1} and IEC
- Pulse output included

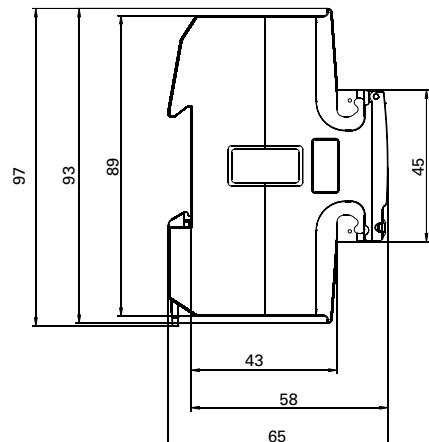

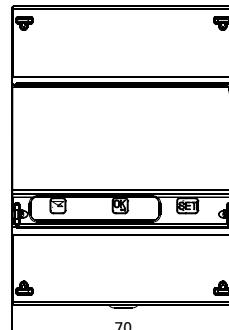

*1 Regional different requirements apply in Switzerland in connection with MID energy meters.

Voltage V	Precision class	Inputs/outputs	Communication	Type	Item no.	Weight
3 x 230/400 V AC	Active energy: B (class 1)	2 outputs, 2 inputs	Pulse output	B24 311-10J	14.01.359	0.27
	Reactive energy: class 2		Pulse output, RS-485	B24 312-10J	14.01.360	0.27
			Pulse output, M-Bus	B24 313-10J	14.01.361	0.29

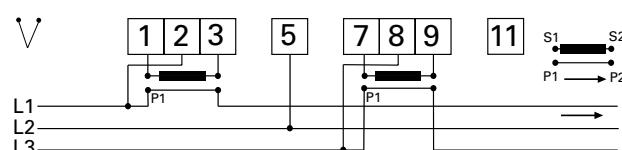

Dimensions in mm

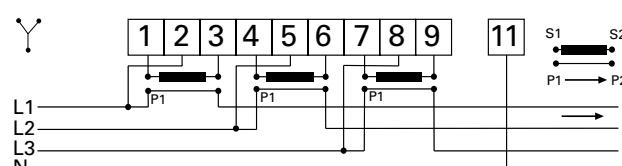

B24 Connection terminals

Janitza current transformer

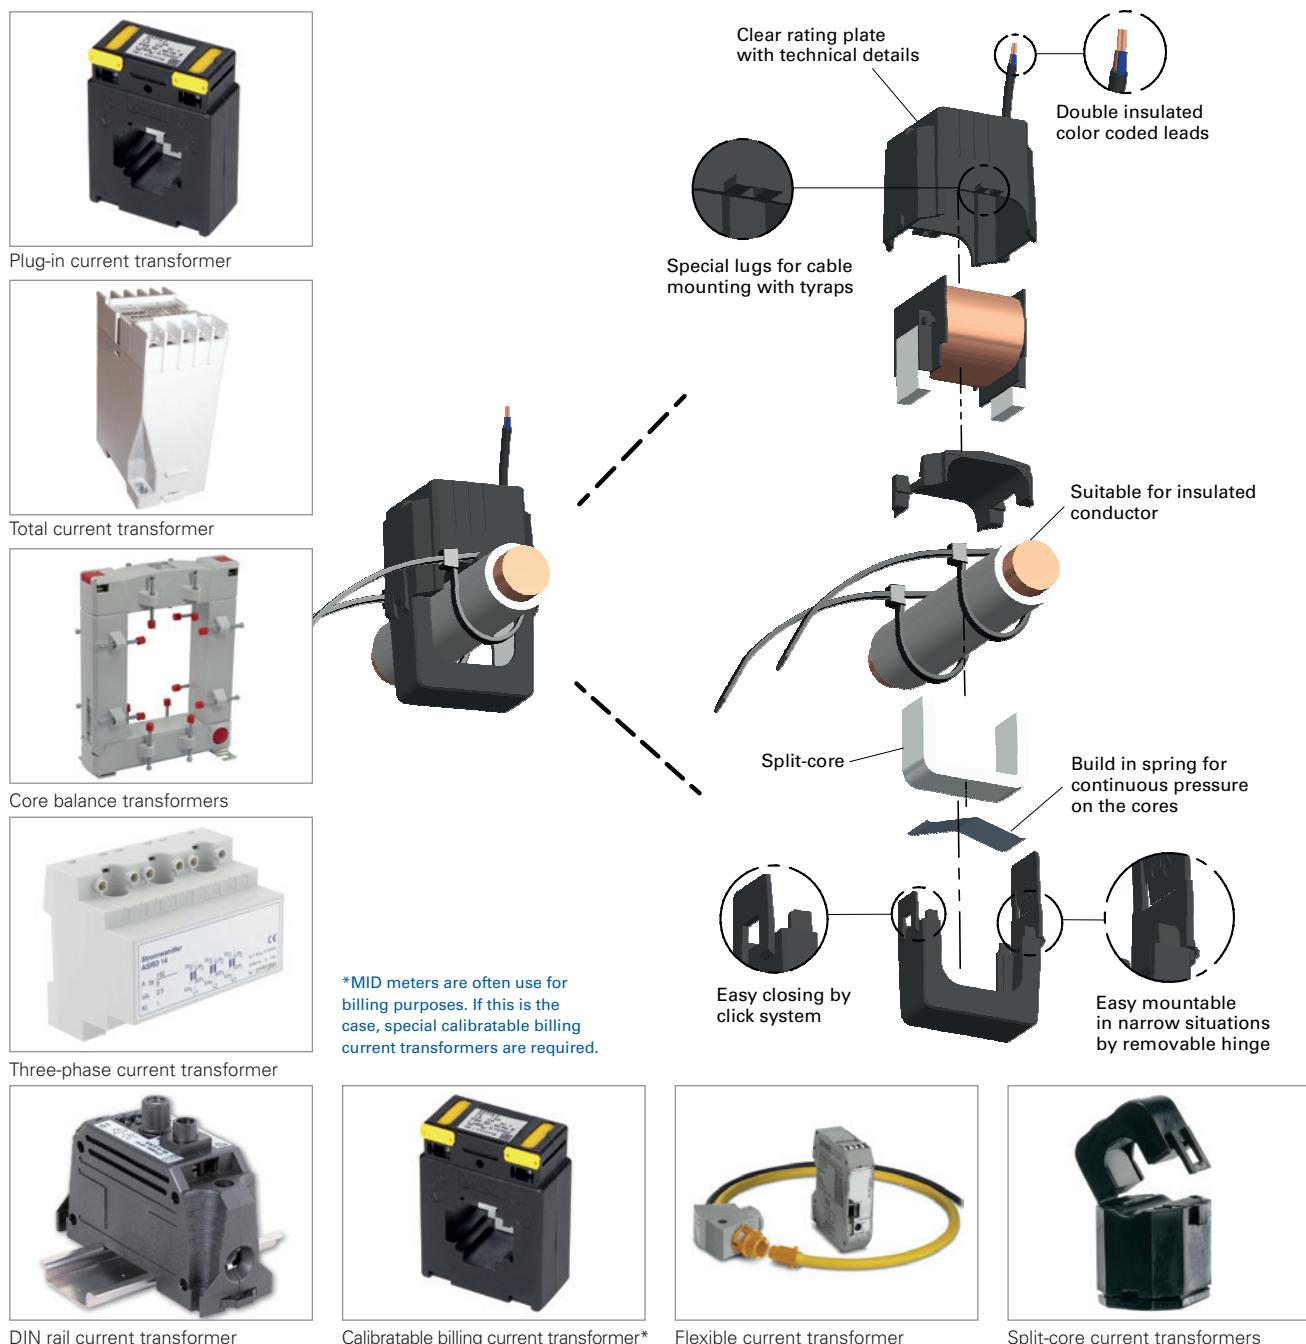

The link between heavy current and digital technology

Janitza current transformer

The link between heavy current and digital technology

Current transformers are predominantly utilised in areas in which it is not possible to measure current directly. They convert almost any level of primary current into "bite-sized" secondary current. In doing so, the secondary output is .../1 or .../5A.

Janitza electronics® has a broad spectrum of different current transformers, be they plug-in current transformers, total current transformers, differential current transformers or core balance transformers. Low-power transformer with mA outputs and Rogowski coils including converter with 1 A output complete the product range.

GridVis® – network visualisation software

With GridVis®, Janitza offers powerful, user-friendly software to develop energy and power quality monitoring systems. The basic software version GridVis®-Basic, which is supplied together with the measuring devices, is used both to program and configure the Janitza measuring devices, as well as to read out, save, display, process and analyse the measurement data. GridVis® is a comprehensive and scalable software solution for energy suppliers, industrial applications, facility management, the building market and infrastructure projects. GridVis® provides technicians and managers with the required data to identify potential energy savings, reduce energy costs, avoid production shutdowns and optimise utilisation of production resources.

- Intuitive operation
- Configuration of the measurement system and the UMG measurement devices
- Certified ISO 50001 EnMS software
- Automatic or manual readout of measurement data
- Graphical illustration of online and historical measurement data
- Comprehensive alarm management
- User management
- Generic Modbus devices, virtual meters
- Graphic user interface (topological view) for visualising real-time data and messages

- Minimum, average and maximum values can be displayed in a graph
- Statistical evaluation of the measured data
- Comprehensive export functions (e.g. Excel)
- Reports for energy usage and power quality (EN 50160, IEEE 519, EN 61000-2-4) manual or time-controlled with individual schedule
- Saving data in a central database including database management (e.g. MySQL / MS SQL / Derby / Janitza DB)
- Open system architecture and scalability

Various characteristics depend on the version
