

# TB-IP Series Current Input Distribution Isolator

● DC24V power supply provides power distribution for on-site transmitters, while isolating and transmitting the current signals generated by the transmitters from the site to the control room, PLC/DCS, etc.

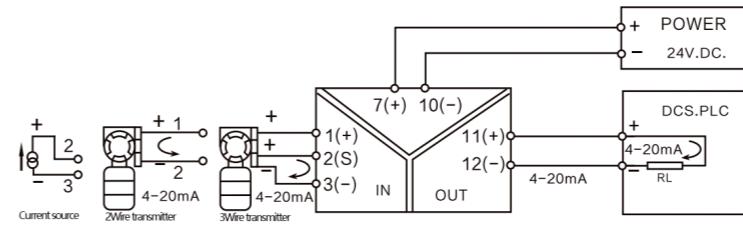

● Input interface current source, universal for two wire and three wire transmitters; Internally, efficient magnetolectric isolation technology is used, with input, output, and power sources isolated from each other, featuring high accuracy, high linearity, and low temperature drift.

● DIN rail independent installation method.

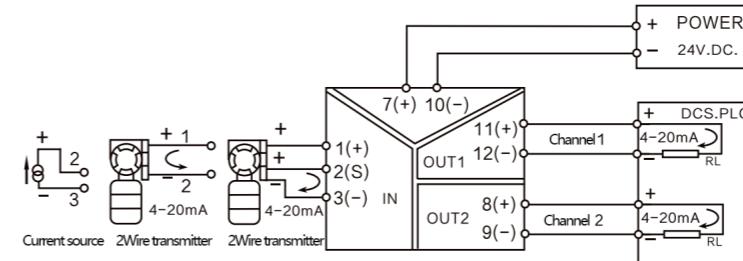

Electromagnetic Compatibility: According to GB/T 18268.1(IEC61326-1)

Applicable Field Equipment: 2Wire,3wire transmitter,current source

### Basic Parameter

Power supply: DC24V,Voltage range:DC18-36V

Consumption current: ≤50mA(1 IN 1 OUT,DC24V,when 20mA output)

≤70mA(1 IN 2 OUT,DC24V,when 20mA output)

Basic accuracy: ≤0.1%F.S

Temperature drift: 0.005%F.S/°C (-20°C~+55°C)

Response time: ≤20mS(0-90%)(TYP)

Insulation strength: 2500VAC/1min(Between input,output and power)

Insulation resistance: ≥100MΩ(Between input,output and power)

Working temperature range:-20~+55°C

## TB-I/U Series Current/Voltage Input Distribution Isolator (Loop power supply)

- The TB-IP series passive isolators are used to connect on-site two wire transmitters, provide power to them, and receive 4-20mA current signals from the two wire equipment output. After isolation, they output 4-20mA current signals. Adopting a two wire loop power supply method, there is no need for external power supply.
- The TB-I/U series passive isolator receives DC current or DC voltage signals from the site, and after interference suppression, isolates and outputs a 4-20mA current signal. Adopting a two wire loop power supply method, there is no need for external power supply.
- DIN rail independent installation method.

TB-TC1XX 1 IN 1 OUT Only Include input and output 1 part

Note: When inputting thermocouples, the compensation wire should be directly connected to the input terminal, and wires of other materials should not be connected in the middle, otherwise it will cause measurement errors.

Cold end compensation: accuracy: ± 1 °C, compensation range: -20 °C~+60 °C

Compensation method: internal compensation (default); External compensation (optional). When selecting external compensation, we need to order our dedicated external cold end compensation terminal.

Alarm indication: The input is below the lower limit of the range, the red indicator light is constantly on, and the output current is about 3.8mA. The input is above the upper limit of the range, the red indicator light is constantly on, and the output current is about 20.5mA. When the input is disconnected, the red indicator light flashes and the output current is approximately 22mA.

# TB-AI/AU Series AC Current/Voltage Transmitter

- The TB-AI series AC current transmitter converts AC signals from AC transformers into standard process signals, used for central monitoring of motors, pumps, or heating networks by DCS, and monitoring power supply lines and their currents.
- High reliable isolation of input, output, and power ports.

SELECTION TABLE				Instructions
TB-TR	X	X	X	1 IN 1 OUT
Channel	1			
	A			0-1A
	B			0-5A
	C			0-10A
	D			0-100V
	E			0-300V
	F			0-500V
	Z			Customized
	1			4-20mA
	2			0-20mA
	5			0-5V
	7			0-10V

Note: Customers need to determine the input signal form and output signal form when placing an order. If there are special needs, they can customize it

## Product Selection

Product Selection:  
TB-AIXXX  
EG:TB-AI1B1,1 IN 1 OUT,ac current input 0-5A,output:DC 4-20mA.

## MAIN TECHNICAL PARAMETERS

### Input

Input current range:AC 0-10A  
Input voltage range:AC 0-500v  
Frequency range:40Hz-60Hz

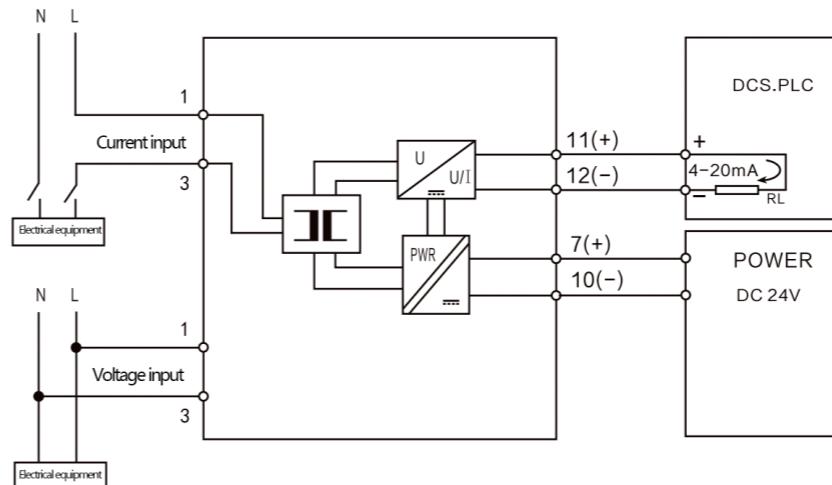

### Output

Output signal:4-20mA;0-20mA;0-5v;0-10v  
Output load resistance:RL≤500Ω (Output is current signal)  
RL≥10KΩ (Output is voltage signal)

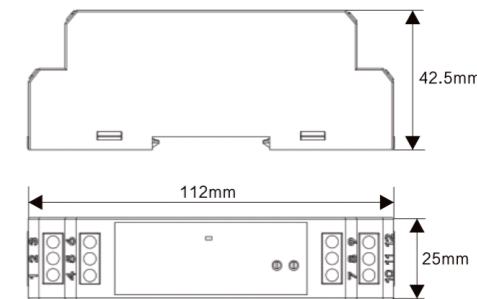

### Basic parameter

Power supply: DC24V, voltage range: DC18-36V  
Rate power:≤1W (1 IN 1 OUT,DC24V,when 20mA output)  
Basic accuracy: ≤0.5%F.S  
Temperature drift: 0.02%F.S/°C  
Response time:≤400mS(0-90%)(TYP)  
Insulation strength: 2000VAC/1min(Between input,output and power)  
Insulation resistance:≥100MΩ(Between input,output and power)  
Working temperature range: -20~+55 °C  
Electromagnetic compatibility:In accord with GB/T 18268(IEC61326-1)

## TB-AI/AU Series AC Current/Voltage Transmitter(Loop power supply)

- The TB-AI/AU1X0 series AC current/voltage transmitter converts AC signals from AC transformers into standard process signals, used by DCS for central monitoring of motors, pumps, or heating networks, and monitoring the current/voltage of power supply machines.
- Adopting a two wire loop power supply method, without the need for power supply; High reliable isolation of input and output.

SELECTION TABLE				Instructions
TB-TR	X	X	X	1 IN 1 OUT
Channel	1			
	A			0-1A
	B			0-5A
	C			0-10A
	D			0-100V
	E			0-300V
	F			0-500V
	Z			Customized
Output Signal	0			4-20mA(Loop power supply)

Note: Customers need to determine the input signal form and output signal form when placing an order. If there are special needs, they can customize it

## TB-AI/AU Series AC Current/Voltage Transmitter(Loop power supply)

- TB-DI/U is a process signal that converts DC current and voltage signals into standard signals.

Used for central monitoring of motors, pumps, or heating networks by DCS, monitoring power supply lines and their currents.

- The three ports of input, output, and power supply are highly reliable and isolated.
