2019-2020

About Us

Hangzhou Shenshi Energy Conservation Technology Co., Ltd.(HZSS) was set up in the year of 2005 (Original name of Hangzhou Shenshi Heat Exchanger Co., Ltd.), Is one of the largest manufacturers of Coaxial coil heat exchanger, Coil in shell heatexchanger, Shell & pipe heat exchanger and Shell & tube heat exchanger, and owner of the global-leading technology of integrated micro-channel heat exchanger and complete set of micro chemical reactors. HZSS focus on production and marketing and innovation of high efficiency and energy saving heat exchangers.

Application

Our products have been successfully used into appllications like: heat pump, ice machine, water purifier, pool heat pump, marine AC, water chiller, CO2 heat pump, medical facility, micro chemical, aerospace, military, top universities'labs etc.

R & D

Laying on constant innovation and invention, and outstanding flexible customization ability, perfecting products and solutions, improvement, We gets to win the trust and cooperation of global customers. In the field of energy saving, We can provide the service including of designing, manufacturing, testing and other one-stop service for customers.

Production

Our factory has highly efficient management and good quality assurance system, with a varieties of modern automated production and testing equipment, scale and production capacity in the lead of the filed, precision and quality in the industry has been in the position of the way ahead.

Quality

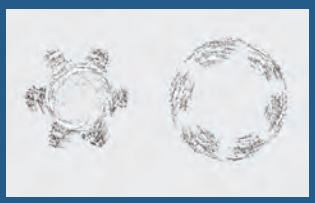
Top-ranking inspection devices, strict material quality control method, and perfect process control system make excellent quality in HZSS.

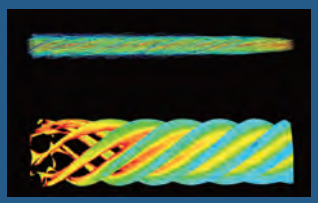
CONTENTS

Supercritical CO_2 HE

Product Profile

HZSS's self developed supercritical co_2 HX is applied in transcritical carbon dioxide heat pump water heater system.





Product Features

1.Water in the inner coil and gas in between the inner and outter coil to enhance turbulence intensity and heat transfer coefficient.
2.Spirally corrugated tubes increase heat transfer area to creat higher efficiency.
3.Reliable with higher pressure stand and less welding points.
4.Anti-frezzing and self cleaning.
5.Cupronickel inner tube gives better compression performance, and corrossion resistance.

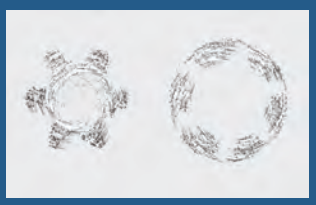
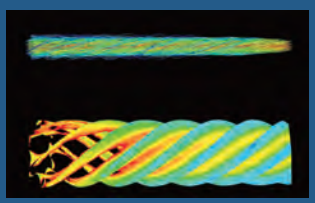
HZSS®

Water source Heat pump HE

Product Profile

HZSS's WSHP coils are specially made for water source heat pump as evaporator and condenser, with flexible shape , compact and high efficiency.





Product Features

1. Water in the inner coil and gas in between the inner and outter coil to enhance turbulence intensity and heat transfer coefficient.
2. Different inner tube materials avaiable: copper, coppernikle, Stainless Steel, Titanium.
3. Reliable with higher pressure stand and less welding points.
4. Anti-frezzing and self cleaning.

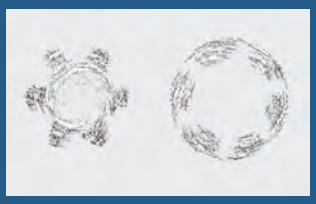
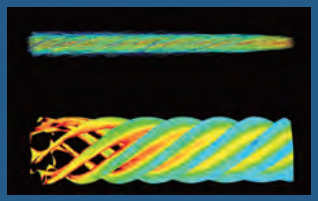
Marine Condensing Coils

Product Profile

HZSS Marine condensing coils are made of titanium with enhanced groove line technolgy to achieve high efficient and high corrosion resisantce.





Product Features

1.Water in the inner coil and gas in between the inner and outter coil to enhance turbulence intensity and heat transfer coefficient.
2.Spirally corrugated tubes increase heat transfer area to creat higher efficiency.
3.Reliable with higher pressure stand and less welding points.
4.Anti-frezzing and self cleaning.
5.Titanium inner tube with high corrosion resistance.
6.Enhanced groove line inner tube surface increase heat transfer efficient by 30%.

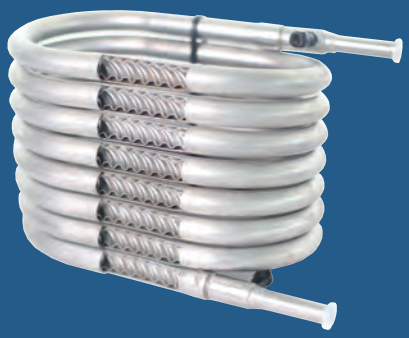
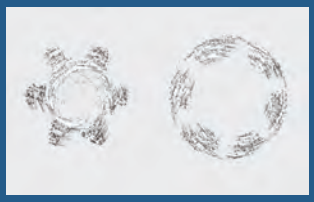
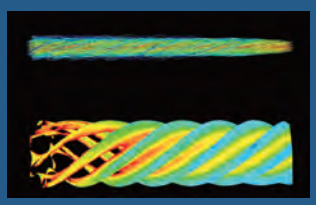
Water Purifier/Evaporator

Product Profile

HZSS's Water purifier coils have both internal and external pipes made of food-grade stainless steel and provide users of water purifiers with safe ice water or hot water through refrigeration or heat pump systems.







Product Features

1.Water flow in the inner tube and refrigerant flow in gap between the inner and outter coil, to enhance turbulence intensity and heat transfer coefficient.

2.Spirally corrugated inner tube increase heat transfer surface to creat higher efficiency.

3.Reliable with higher pressure stand and less welding points.

4.Anti-freezing and self-cleaning.

5.Inner tube is food grade stainless steel, to ensure safety and reliability

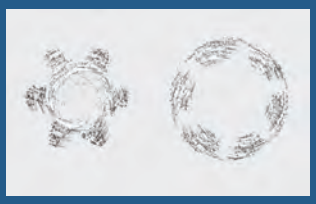
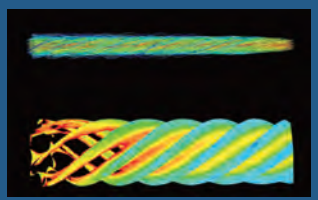
Dishwasher/Washing machine /Battery cooling

Product Profile

HZSS's coils are also applicable to dishwashing machine, provide hot water for washing machine, better temperature environment for battery system in order to extend battery life duration.





Product Features

1.Water flow in the inner tube and refrigerant flow in gap between the inner and outter coil, to enhance turbulence intensity and heat transfer coefficient.
2.Spirally corrugated inner tube increase heat transfer surface to creat higher efficiency.
3.Reliable with higher pressure stand and less welding points.
4.Anti-freezing and self-cleaning.

Gas air source absorption heat pump

Product Profile

HZSS's gas air source absorption heat pump coils are applicable to ammonia absorption type air conditioners or heat pumps. The inner tube is made of stainless steel and is resistant to ammonia solution corrosion. The coolers, condensers and regenerators.Cooling system.

Product Features

1.Water flow in the inner tube and refrigerant flow in gap between the inner and outter coil, to enhance turbulence intensity and heat transfer coefficient.

2.Spirally corrugated inner tube increase heat transfer surface to creat higher efficiency.

3.Reliable with higher pressure stand and less welding points.

4.Anti-freezing and self-cleaning.

5.In gas air source absorption heat pump, the cooler is an important component, while the ammonia gas is mixing with ammonia liquid, theheat is absorbing and releasing by gas and liquid.

6.HZSS coaxial coil heat exchanger is designed with spirally corrugated inner tube, to let the ammonia gas and liquid to mix completely.

7.This heat exchanger with long passage is suitable for heat gradual absorption and release process.

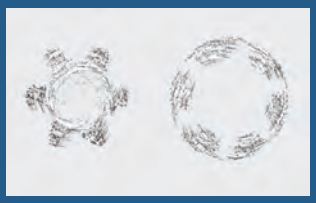
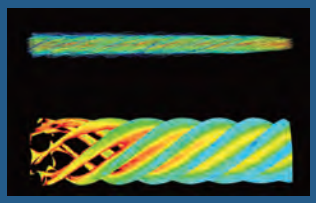
Economizer/Subcooler /Superheater

Product Profile

HZSS Subcooler is applied on refrigeration systems to transfer heat between liquid on the high pressure side of the system and refrigerant on the low pressure side of the system.





Product Features

1.Low pressure refrigerant flow in the inner tube and High-pressure refrigerant flows in between inner and outter tube.
2.Spirally corrugated tubes increase heat transfer area to creat higher efficiency.
3.Reliable with higher pressure stand and less welding points.
4.Flexible design and less space needed.

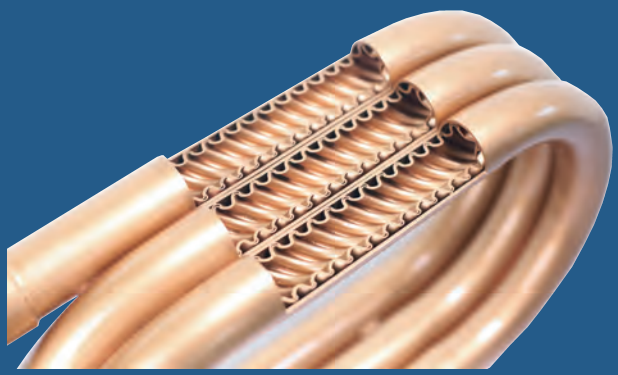
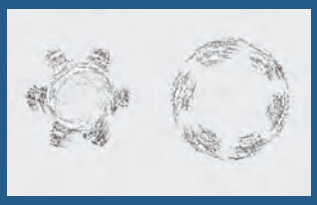
HZSS®

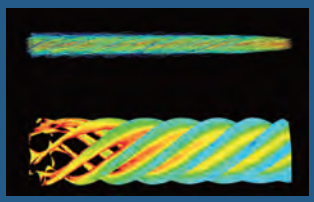
Other type of coils

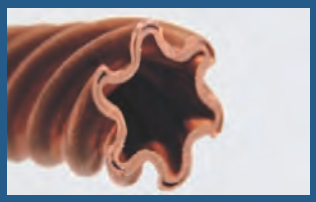
Product Profile

HZSS's other type of coils are strong safety, if leakage occurs in the inner layer of the inner tube, water will flow out of the inner tube and play an early warning role. If leakage occurs in the inner layer, the refrigerant leaks from the interlayer and will not enter the water.









Product Features

1.Water flow in the inner tube and refrigerant flow in gap between the inner and outter coil, to enhance turbulence intensity and heat transfer coefficient.

2.Spirally corrugated inner tube increase heat transfer

surface to creat higher efficiency.

3.Reliable with higher pressure stand and less welding points.

4.Anti-freezing and self-cleaning.

5.Double wall inner tube more relibalilty and safety.

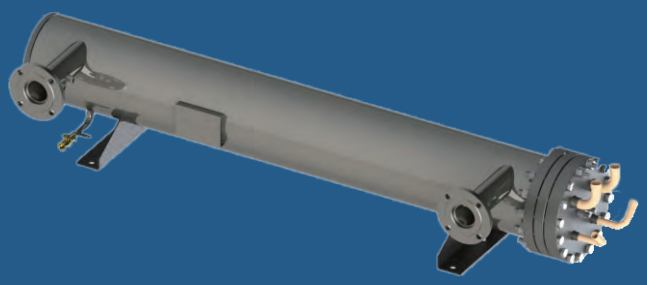
Shell & tube heat exchanger

Product Profile

HZSS Shell & tube heat exchanger has the advantages of high heat transfer performance, safe to use, compact size, high cost performance. It is widely used into applications like cold and hot water modular units.



Product Features

High Efficiency

High efficiency HX with enhanced tubing design

HZSS's patented design of distributor adopts better cooling distribution

Spiral baffles is superior to traditional baffles

Cost Performance

High cost performance

Effectively Cost controlled

Safety

Designed and manufactured according to pressure vessel standards

No solder joints in contact with water

Extremely resistant to freezing

Compact

Compact Design

Optimal interface arrangement

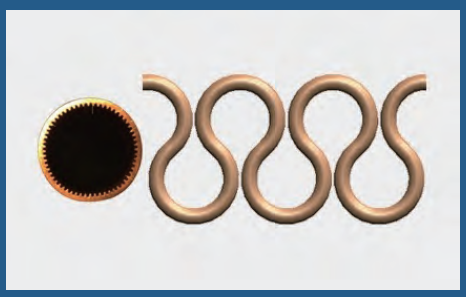
Plastic steel shell and pipe heat exchanger

Product Profile

This product is a kind of high efficiency heat exchanger which is composed of high efficient Ω style inner pipes and plastic shell.It has the advantages of both shell & tube heat exchanger and plate heat exchanger.The shell is made up of plastic inner tank, and foam insulation layer and stell shell. The inner tubes arrangement method has been certificated as our technology invention patent.



Product Features

1.Anti-Freezing

Both Heat exchanging inner core with structure of Ω and plastic baffle plate possess the ability of elasticity to obtain t he function of anti-freezing.

2.Anti-Corrosion, Long serve life

HZSS patented structure of plastic baffle plate and titanium inner core has long serve life and high corrosion resistance.

3.High Efficiency

Our heat exchanging inner core are internal threaded to obtain more heat transfer area and turbulence flow in order to achieve higher efficiency.

4.Special Refrigerant connection sealing to avoid leakage

Sealing components are special material to resist temperature

from 200℃ to -20℃, and sealing covers are screw threaded to ensure reliability.

5.Easy maintainence and cleaning

The shell is designed to be dismountable to make maintainence and cleaning much easier.

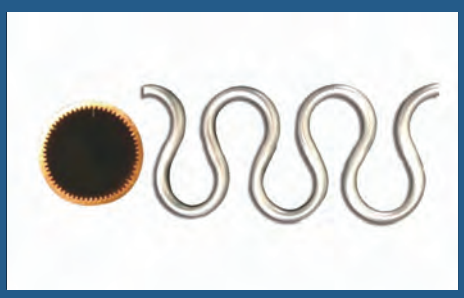
Swimming pool plastic shell pipe Titanium HE

Product Profile

Shell and pipe heat exchanger is a kind of high efficiency heat exchanger which is composed of high efficiency Ω style inner pipes and shell of baffle plastic plate(-PA6). It has the advantages of shell & tube heat exchanger and plate heat exchanger.



Product Features

1.Anti-Freezing

Both Heat exchanging inner core with structure of Ω and plastic baffle plate possess the ability of elasticity to obtain the function of anti-freezing .

2.Anti-Corrosion, Long serve life

HZSS patented structure of plastic baffle plate and titanium inner core has long serve life and high corrosion resistance.

3.High Efficiency

Heat exchanging inner core are internal threaded to obtain more heat transfer area and turbulence flow in order to achieve higher efficiency;

4.Special Refrigerant connection sealing to avoid leakage.

5.Easy maintainence and cleaning

The shell is designed to be dismountable to make maintainence and cleaning much easier.

Coil-in-shell heat exchanger

Product Profile

HZSS's turbular heat exchanger is suitable for refrigeration (heat pump) system, which pipe runs water and shell runs refrigerant.

Product Features

Precision

Full process automation, efficient welding robots ensure the accuracy of welding and the quality of the weld .

Reliable

Six sigma design, strict quality assurance.

Performance

Excellent condensation and evaporation performance, reliable and efficient refrigeration and oil return.

Price

Compared with competitive products, the price is right, cost-effective.
