- Connect the swimming pool floor cleaner to end of the hose and attach to the handle. Immerse the floor cleaner and place the hose in the water in order to fill it and avoid any air entering same. Connect the hose to the swimming pool suction inlet, open the suction valve restrict the flow of water through the catch basin and skimmer valves in order to increase the speed of the water circulation through the suction pipes and thus increase the suction power of the floor cleaner. When carrying out this operation, care must be taken to avoid the formation of air pockets in the installation, if this occurs, open the catch basin and skimmer valves slowly.
Every time floor cleaner is used, it is advisable to wash the filter afterwards and also to clean the pre-filter on the pump.
- The vacuum head has been designed to function at a flow of between 4 and 5 feet second. Use at a higher speed may cause the vacuum head to adhere to the bottom of the pool. In order to avoid too much suction, regulate flow either by adjusting the trimmer valve plates or by removing one of the baffles (rubber deflectors).
- The screw at both ends of the vacuum head can be adjusted, to increase or decrease spring strength for better swimming pool cleaning effect.
