

## TE-5/0.1

TE-5/0.1, Impedance Transformer

Code: M70911.

> Class 1 Power (VA): 15

> Relation: 5 / 0,1 A

### Description

- Accuracy class 1
- Power 15 V·A

### Application

For applications where the measurement unit can not be installed near the measurement transformer and, as a consequence, the distance between both is longer. The problem lies in the fact that increasing the distance increases the number of losses caused by the overheating of the cable and in some cases the unit might not take readings accurately. With this unit at the transformer's output and another unit at the input of the measurement device we can increase the distance between both without so many power losses.

## TE-5/0.1

Impedance elevator transformer

Code: M70911.

### Specifications

#### Mechanical characteristics

Weight (kg)	0,51
-------------	------

TE  
Impedance step-up transformer

CODE	TYPE	Class 1 Power (VA)
M70911.	TE-5/0.1	15

It is used when the distance between the measuring equipment and the current transformer is very long. Two TE must be used, one next to the current transformer and the other next to the measuring equipment.
